The Adventure:
Run a string between two chairs about a metre off the ground. Now imagine that your Company is a giant amoeba—you are all part of a single cell, and you must remain in physical contact with one another.

Imagine the string is an electric fence that you must get past. You cannot go around the fence, and it cannot be insulated or turned off. How will your whole Company get past the electric fence without coming in contact with it?

Plan:
- When and where will you share this challenge?
- Who will lead the group?
- What materials will you need for this challenge? How will you set up your electric fence?
- How will you get past the electric fence?
- What rules will everyone need to follow?

Do:
- Work as a team to get over (or under?) the electric fence while remaining in physical contact with one another.

Review:
- What do you know now that you did not know before?
- What was your favourite part of this challenge?
- What would you change if you were to try this again?
- Who emerged as a leader on this challenge?
- How did you work as a team on this challenge?
- What close calls or incidents did your group experience? How could they have been prevented?

Safety Note:
- What risks do you anticipate with this activity, and how can they be mitigated?
- How should everyone be dressed for this challenge?

Plan:
- What are the positions for your Company’s Leadership Team? How can you learn more?
- What position is a good fit for your strengths and interests?
- How will your Company select the members of its Company Leadership Team?

Do:
- Work as a team to get over (or under?) the electric fence while remaining in physical contact with one another.
